Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1-22.   (Canceled)

23.   (currently amended) A method performed by a processor, comprising:

receiving, at the processor, a plurality of search queries from a [[user]] client device;

creating, by the processor, a customized news document including a plurality of personalized news sections, with each news section being defined by one of the plurality of search queries;

receiving, at the processor, an indication from the [[user]] client device specifying a number of news items to include in at least one of the plurality of personalized news sections;

retrieving, by the processor, items of news content from memory using the plurality of search queries; and

inserting, by the processor, selected items of news content of the retrieved items of news content, corresponding to the specified number of news items, into the at least one of the plurality of the personalized news sections of the customized news document.

24.   (Previously presented) The method of claim 23, further comprising:

retrieving updated items of news content from the memory using the plurality of search queries; and

periodically inserting the selected items of news content of the updated items of news

content, corresponding to the specified number of news items, into the at least one of the

plurality of the personalized news sections of the customized news document.

25.   (Previously presented) The method of claim 23, wherein the items of news content are

retrieved from a plurality of news source servers and aggregated via a news aggregation service

in the memory.

26.   (Previously presented) The method of claim 25, wherein the customized news document

is hosted at a news aggregation server that further hosts the news aggregation service.

27.   (Previously presented) The method of claim 25, wherein the customized news document

is hosted at a server that is remote from a news aggregation server that hosts the news

aggregation service.

28.   (currently amended) The method of claim 23, further comprising:

        notifying the [[user]] client device of the updated items of news content.

29.   (currently amended) The method of claim 28, wherein notifying the [[user]] client device

of the updated items of news content comprises notifying [[the]] a user of the client device via at

least one of a page, an e-mail, a FAX, and a telephone call.

30.   (Previously presented) The method of claim 23, further comprising:

registering the customized news document with a registry; and

providing access for other users to the customized news document via the registry.

31.   (Previously presented) A news aggregation server, comprising:

a memory configured to store instructions and news content; and

a processing unit configured to execute the instructions in memory to:

        obtain a plurality of search queries from a user,

        create a customized news document including a plurality of personalized news
sections, with each news section being defined by one of the plurality of search queries,

        retrieve items of news content from the memory using the plurality of search
queries,

        receive an indication from the user specifying a manner of ranking news items
within one of the plurality of personalized news sections,

        rank, based on the user specified manner of ranking news items, selected items of
news content of the retrieved items of news content in a ranked order, and

        insert the selected items of news content of the retrieved items of news content in
the ranked order into the one of the plurality of the personalized news sections of the
customized news document.

32-38. (Canceled)

39.   (Previously presented) A system, comprising:

means for receiving a plurality of search queries from a user;

means for creating a customized news document including a plurality of personalized news sections, with each news section being defined by one of the plurality of search queries;

means for receiving an indication from the user specifying a number of news items to include in at least one of the plurality of personalized news sections;

means for retrieving items of news content from a plurality of sources of news content using the plurality of search queries; and

means for inserting selected items of news content of the retrieved items of news content, corresponding the specified number of news items, into the at least one of the plurality of the personalized news sections of the customized news document.

40.   (currently amended) A method performed by a processor, comprising:

dividing, by the processor, a news document into a plurality of news sections;

receiving, at the processor, a first search query and a second search query from a client device;

receiving, at the processor, an indication from a user of the client device specifying a manner of ranking news items within a first news section of the plurality of news sections;

searching, by the processor, news content based on the first search query to obtain a first set of related news items;

ranking, by the processor, based on the user specified manner of ranking news items, the first set of related news items in a ranked order;

searching, by the processor, the news content based on the second search query to obtain

a second set of related news items;

populating, by the processor, the first news section of the plurality of news sections with the first set of related news items in the ranked order; and

populating, by the processor, a second news section of the plurality of news sections with the second set of related news items.

41.   (currently amended) The method of claim 40, wherein the first and second search queries are received from the client device a user via a network.

42.   (currently amended) The method of claim 40, wherein the first and second search queries are selected by a user of the client device from a list of search queries.

43.   (Previously presented) The method of claim 42, wherein the list of search queries comprises search queries previously used by the user to search the news content.

44.   (currently amended) The method of claim 40, further comprising:

receiving an indication from the client device a user specifying a number of news items to include in the first news section,

wherein populating the first news section comprises obtaining the number of news items from the first set of related news items.

45.   (currently amended) The method of claim 40, further comprising:

receiving an indication from the client device a user specifying one or more preferences

for certain kinds of news sources for the news content,

wherein searching the news content based on the first search query is further based on the

one or more preferences.

46.   (Canceled)

47.   (Previously presented) The method of claim 40, wherein ranking, based on the user

specified manner of ranking news items, the first set of related news items in a ranked order

comprises:

receiving selected keywords from the user; and

boosting selected news items of the first set of related news items higher in the ranked

order when the selected news items contain one or more of the selected keywords.

48.   (Previously presented) The method of claim 40, further comprising:

receiving an indication from a user specifying preferences for journalists who author

news items of the news content,

wherein searching the news content based on the first search query is further based on the

user-specified preferences for journalists.

49.   (Previously presented) The method of claim 40, further comprising:

receiving an indication from a user specifying preferences for genres of news among the

news content,

wherein searching the news content based on the first search query is further based on the

user specified preferences for genres of news.

50. (Previously presented) The method of claim 40, further comprising:

deleting the first news section from the news document based on an instruction received

from a user.

51. (Previously presented) The method of claim 40, further comprising:

labeling, on the news document, the first news section with a first label related to the first

search query.

52. (Previously presented) The method of claim 51, further comprising:

labeling, on the news document, the second news section with a second label related to

the second search query.

53. (Previously presented) The method of claim 40, wherein the first and second search

queries are received from a user and further comprising:

providing the news document to the user.

54. (Currently amended) A <u>computer-readable memory device containing instructions for</u>

<u>execution by one or more processors, the computer-readable memory device including</u>

instructions for performing a method, the method comprising:

aggregating news content from a plurality of news source servers;

dividing a web page into a plurality of news sections;

receiving a personalized search query from a user;

receiving an indication from the user specifying a number of news items to include in the

first news section;

searching the aggregated news content based on the personalized search query to obtain a

first set of related news items; and

populating only a first news section of the plurality of news sections of the web page with

a number of the first set of related news items corresponding to the user specified number of

news items.

55.   (currently amended) The ~~method~~ computer-readable memory device of claim 54, wherein

the personalized search query is received from the user via a network.

56.   (currently amended) The ~~method~~ computer-readable memory device of claim 54, wherein

the personalized search query is selected by the user from a list of search queries.

57.   (currently amended) The ~~method~~ computer-readable memory device of claim 56, wherein

the list of search queries comprises search queries previously used by the user to search the news

content.

58.   (currently amended) The ~~method~~ <u>computer-readable memory device</u> of claim 54, further comprising:

receiving an indication from the user specifying one or more preferences for certain kinds of news sources for the news content,

wherein searching the news content based on the personalized search query is further based on the one or more preferences.

59.   (currently amended) The ~~method~~ <u>computer-readable memory device</u> of claim 54, further comprising:

receiving an indication from the user that specifies a manner for ranking news content within the first news section; and

ranking news items of the first set of related news items in a rank order based on the specified manner for ranking.

60.   (currently amended) The ~~method~~ <u>computer-readable memory device</u> of claim 54, further comprising:

receiving selected keywords from the user; and

ranking selected news items of the first set of related news items based on the selected keywords.

61.   (currently amended) The ~~method~~ <u>computer-readable memory device</u> of claim 54, further comprising:

receiving an indication from the user specifying preferences for journalists who author

news items of the news content,

wherein searching the news content based on the personalized search query is further

based on the user-specified preferences for journalists.

62.   (currently amended) The ~~method~~ computer-readable memory device of claim 54, further

comprising:

receiving an indication from the user specifying preferences for genres of news among

the news content,

wherein searching the news content based on the personalized search query is further

based on the user specified preferences for genres of news.

63.   (currently amended) The ~~method~~ computer-readable memory device of claim 54, further

comprising:

providing the web page to the user.

64.   (currently amended) A method performed by a device, comprising:

crawling, by the device and using a web robot, news content documents hosted by a

plurality of news source servers;

fetching, by the device, news content from the crawled news content documents;

indexing, by the device, the fetched news content to produce indexed news content;

dividing, by the device, a news document into a plurality of news sections;

receiving, by the device, a first user search query from a client device via a communication interface;

searching, by the device, the indexed news content based on the first user search query to obtain a first set of related news items; and

populating, by the device, only a first news section of the plurality of news sections of the news document with the first set of related news items.

65.   (Previously presented) The method of claim 64, wherein the news document comprises a web page.

66.   (Previously presented) The method of claim 64, further comprising:

obtaining a second set of related news items from the fetched news content; and

populating a second news section of the plurality of news sections of the news document with the second set of related news items, wherein the second news section is different than the first news section.

67.   (Previously presented) The method of claim 64, further comprising:

receiving a second user search query;

searching the indexed news content based on the second user search query to obtain a second set of related news items; and

populating only a second news section of the plurality of news sections of the news document with the second set of related news items.

68.   (Previously presented) The method of claim 23, further comprising:

crawling, using a web robot, news content documents hosted by a plurality of news source servers;

fetching news content from the crawled news content documents; and

indexing the fetched news content to produce indexed news content stored in the memory,

wherein retrieving items of news content from memory comprises:

searching the indexed news content based on the plurality of search queries to retrieve the items of news content.
